

West Hazelwood Construction Project

Instructions in case of water quality issues:

Throughout the W. Hazelwood main replacement project there will be instances when the water main will be shut down for a short amount of time. During these times, residents may experience brown or cloudy water, which is completely normal. If this occurs, simply run your cold water and it should clear up within the hour. If this issue is not resolved within an hour, or if you have any other water quality questions or concerns, please call Suez at 732-388-0086.
